

Financial market participation 2020, 2023–2026

How capital from personal, friend and family sources was deployed across FX, futures, equities, commodities, metals and crypto, what it returned, and what has flowed back.

Foabao

FIBAM · MXET Services

Data as of 24 Sep 2026 · Version 1.0.0

Seven years, 19 accounts: the prop-firm route cost \$1,016 in fees, while the two equity funds are the only positive results

19 accounts, 2020 to Sep 2026	\$2,846 capital deployed in markets	2,124 trades logged	-\$886 net result on a cash basis
---	---	-------------------------------	--------------------------------------

What the record shows

Participation came in three waves. A first personal account in the COVID crash (2020), a two-year pause, then personal and prop-firm accounts in 2023–24, and since 2025 the equity funds plus a second prop campaign in 2026.

Most capital came from others. Of \$2,846 deployed, 24% was personal, 49% came from friends and 27% from family. 61% went into US instruments, 35% into global FX and 4% into Nigerian equities.

Prop evaluations were the costly way in. 15 evaluations cost \$1,016 in fees; 2 stages were passed and no payout has been received. Their -\$15,817 of account-level losses was never personal capital, so this report counts the fee, not the notional loss, as the cash cost.

The equity funds are the positive strand. 1kHooD earned +\$681 on \$1,000 (68%). NGX earned ₦92,037 net of fees on ₦150,000 (61%).

Little has flowed back as capital. ₦400,000 of ₦720,000 has been repaid to one family lender; 1kHooD has distributed \$1,458 in profit shares to the general partner and to TA, its limited partner.

Results are shown on a cash basis: personal-account outcomes, prop-firm fees, and fund trading results. Evaluation-account P&L is reported separately as a memo item.

Participation came in three waves, separated by a two-year gap

2020. One personal FX account, opened as COVID volatility peaked. **2023–24.** A second personal account, then nine prop evaluations in FX and index futures. **2025 onward.** The 1kHooD and NGX funds start, a further six evaluations run in 2026, and both funds are still active. Numbered markers refer to the events on the next page.

Each phase of participation overlapped a major macro or geopolitical shock

#	Period	Event	Relevance to the markets traded
1	11 Mar 2020 – 1 Jun 2020	COVID-19 pandemic and market crash	Record volatility; first live account (Alpari 2020) traded through it
2	3 Nov 2020	US presidential election	Rotation and volatility in US equities and the dollar
3	24 Feb 2022	Russia–Ukraine war begins	Energy and grain shock; commodity and inflation repricing (no participation, 2021–22)
4	30 Nov 2022	ChatGPT released	Start of the AI investment cycle behind later US equity leadership
5	10 Mar 2023	Silicon Valley Bank collapse	Regional-bank stress; rates repriced
6	29 May 2023 – 14 Jun 2023	Nigeria: subsidy removal and FX unification	Naira devalued; reshaped the cost of dollar capital
7	7 Oct 2023	Israel–Hamas war begins	Oil and gold volatility; Alpari 2023 traded WTI and gold
8	1 Jan 2024 – 29 Feb 2024	Naira sell-off	Peak dollar cost for Nigerian funders during the 2024 evaluations
9	5 Aug 2024	Yen carry-trade unwind	Sharp cross-asset drawdown in the middle of the futures evaluations
10	18 Sept 2024	Fed begins cutting rates	Start of the easing cycle
11	5 Nov 2024	US presidential election	Trend day for US indices and the dollar
12	2 Apr 2025	US “Liberation Day” tariffs	Global equity sell-off and rebound; 1kHooD first year
13	13 Jun 2025 – 24 Jun 2025	Israel–Iran 12-day war	Oil and gold spike
14	28 Feb 2026	Iran war and Strait of Hormuz crisis (ongoing)	Oil spike toward \$120 (Brent); US blockade of Iranian ports 13 Apr–29 May; NGX gains in 2026

Dates for 2026 events are from public reporting as of 24 Sep 2026; the Hormuz crisis is ongoing.

61% of capital went to US markets and 35% to global FX; Nigerian equities are a small third leg

By region, share of capital deployed

US	Global	NGX
61%	35%	4%
\$1,735	\$1,004	\$108

By market type

Market type	Region	Trades	Prop and personal accounts	Funds
Futures	US	1,092	-\$13,948	–
Equity index CFDs	US	48	-\$368	–
US stocks	US	350	–	+\$681
Nigerian stocks	NGX	29	–	+\$67
FX	Global	269	-\$1,398	–
Commodities	Global	302	-\$438	–
Metals	Global	30	-\$276	–
Crypto	Global	4	-\$6	–
Total		2,124	-\$16,434	+\$748

US covers futures, equity index CFDs and the 1kHooD stock portfolio. Global covers FX, commodities, metals and crypto, all traded as CFDs on prop and personal accounts. Crypto is four BTCUSD trades in one 2024 evaluation. “Prop and personal accounts” shows account-level results, including evaluation accounts, so it should not be read as cash lost. Funds are 1kHooD (USD) and NGX (converted to USD at prevailing monthly rates).

Prop evaluations were the costliest way in: 15 attempts, 2 stages passed, no payouts

Entry path	Accounts	Capital deployed	Cash result	Status
Retail investing (personal accounts)	3: Alpari 2020, Alpari 2023, NGX brokerage	\$830	-\$551	Alpari closed; NGX active
Prop firms	15: four firms	\$1,016	-\$1,016	All closed; 0 payouts
Managed portfolio (1kHooD)	1: Robinhood, general and limited partner	\$1,000	+\$681	Active
Total	19	\$2,846	-\$886	

Prop firms: fees paid and account-level results

Firm	Accounts	Fees paid	Account-level P&L	Stages passed
MyFundedFutures	5	\$734.50	-\$13,948	0
MyFundedFX	4	\$148.22	-\$1,602	0
FundedNext	1	\$63.21	-\$361	0
The5ers	5	\$70.50	+\$94	2

Evaluation fees by firm

MyFundedFutures	\$735
MyFundedFX	\$148
FundedNext	\$63
The5ers	\$71

Retail accounts are self-directed personal accounts. The managed path is 1kHooD, a fund run as general partner with TA as the limited partner. The two stages passed were both at The5ers in May 2026; the funded account that followed was closed after one day.

Friends and family supplied 76% of the \$2,846 deployed; personal capital was 24%

Capital deployed by source

IF	PO	TA	MO	BA
24%	6%	44%	13%	14%
\$679	\$163	\$1,240	\$361	\$403

IF: personal TA, PO: friends (TA a close friend; PO contributed in 2020 only) MO, BA: family

Where each source went (USD)

Destination	IF	PO	TA	MO	BA	Total
Alpari 2020	131.58	163.13	–	–	–	294.71
Alpari 2023	75.35	–	156.27	195.64	–	427.26
MyFundedFX evaluations (4)	64.22	–	84.00	–	–	148.22
MyFundedFutures evaluations (5)	274.50	–	–	165.00	295.00	734.50
FundedNext and The5ers evaluations (6)	133.71	–	–	–	–	133.71
1kHooD fund	–	–	1,000.00	–	–	1,000.00
NGX brokerage	–	–	–	–	107.64	107.64
Total	679.36	163.13	1,240.27	360.64	402.64	2,846.04

Any funding not explicitly attributed to a source is treated as personal (IF). BA's ~~¥~~442,500 for futures costs is \$295 at ~~¥~~1,500/\$; its ~~¥~~150,000 into NGX is recorded as \$107.64.

Received versus deployed (family, ¥)

Source	Received	Deployed in markets	Into operations
MO (¥ 420,000 investment, ¥ 300,000 loan)	¥ 720,000	≈ ¥ 398,000	≈ ¥ 322,000
BA	¥ 1,000,000	¥ 592,500	¥ 407,500

Capital has been repaid to one funder so far; profit sharing runs through 1kHooD

Repayments to MO (¥)

Date	Repaid	Outstanding
17 May 2024	¥100,000	¥620,000
7 Jul 2024	¥200,000	¥420,000
9 Oct 2024	¥100,000	¥320,000

Outstanding shown in payment order; the source log lists the 9 Oct 2024 payment first.

1kHooD: capital, profit and distributions (USD)

21 withdrawals total \$1,458.39 since Sep 2025, split by the fund's general and limited partner shares in GBP (55% and 45%). They exceed cumulative trading profit by \$777.54, so part of the distributions has in effect come out of capital; the implied balance is \$222.46.

Source	Nature of return	Status
IF (personal)	None expected	–
PO, TA (friends)	TA: profit sharing as limited partner in 1kHooD. PO: none	TA receiving; PO none
MO (family)	Repayment of credit	¥400,000 of ¥720,000
BA (family)	Repayment target	None yet

Returning capital to every source remains a stated target for the journey.

Losses were concentrated in 2024; 2025 and 2026 both finished net positive on a cash basis

By year (USD, cash basis)

Year	Personal accounts	Prop fees	1kHooD	NGX	Net result	Memo: evaluation P&L
2020	-\$293	+\$0	+\$0	+\$0	-\$293	+\$0
2023	-\$325	+\$0	+\$0	+\$0	-\$325	+\$0
2024	+\$0	-\$883	+\$0	+\$1	-\$881	-\$15,265
2025	+\$0	+\$0	+\$68	-\$1	+\$67	-\$285
2026	+\$0	-\$134	+\$612	+\$67	+\$545	-\$267
Total	-\$618	-\$1,016	+\$681	+\$67	-\$886	-\$15,817

By entry path

By market type, account-level result including evaluation accounts

Overall: **-\$886** on \$2,846 deployed (-31%). **Status:** 17 accounts closed, 2 active. NGX in naira: ₦111,942 gross, ₦19,905 fees, ₦92,037 net across 29 closed trades.

Pattern recognition is the core thesis; trades per evaluation fell from 164 in 2024 to 27 in 2026

Primary approach. Generating value from the markets through the application of the art, science and technology of pattern recognition.

Art	Science	Technology
Reading structure, context and behaviour in price: the discretionary judgement of what a pattern means now.	Testing whether a pattern repeats with an edge: samples, expectancy and risk limits rather than anecdote.	Encoding what works into indicators, dashboards and automated systems so it can be applied without drift.

Supporting lenses

Lens	Role
Technicals	Structure, levels, momentum and mean -reversion signals across FX, futures and stocks
Fundamentals	Sector and company selection for the equity funds, including thematic sector intelligence
Events	Macro and geopolitical catalysts: rates, elections, wars, supply shocks (see events, page 4)

Evidence from the record

Evaluations in 2024 averaged 164 trades each and the largest reached 584; in 2026 they averaged 27. Nine evaluations in 2024 lost \$15,549 at account level, against -\$267 across six in 2026. The equity funds, where the horizon is longer, are the profitable strand.

Tooling built along the way

Rule-based systems and dashboards are part of the approach: cTrader (C#) and MT5 (MQL5) implementations of five manual strategies, a Python intraday mean-reversion engine, TradingView Pine Script indicators, and a thematic stock-sector web app.

Basis of preparation

Cash basis. Personal accounts show cash result; prop firms show the evaluation fee paid; funds show trading result before the general and limited partner split. Evaluation-account P&L is memo only.

Currency. Reported in USD. NGX is naira-denominated in source and converted to USD at approximate monthly ₦/\$ levels: recorded rates for 2024 and CBN NFEM levels for 2025–26 (about ₦1,360–1,530). Family amounts are shown in naira as recorded.

NGX. Trade gains in the source are gross; fees are deducted here. One open position (6 Geregu shares) is unrealised and excluded. The source workbook's rolled-up gain (₦110,719) sits ₦778 below the trade-level total because three July 2025 rows carry an open mark rather than the exit price.

Data gaps. Alpari 2020 predates journaling (account-level only). MyFundedFX #2 is partly summarised, MyFundedFX #4 comes from the firm's performance report, and Alpari 2023 uses cash result (–\$324.93) rather than the journal (–\$284.73).

Funding rule. Unattributed funding is personal. No prop payouts, no other accounts, and no participation in 2021–22.

Rebuild. `node tools/build.mjs` regenerates this page from `tools/data.js`; `node tools/make-pdf.cjs` regenerates the PDF from the same page.
